

## Field Services

Wasco Engineering's service offering includes field services for reciprocating compressors, engines and motors, alternators, valves, instruments, process and associated equipment.

Our service engineers undertake various levels of ad-hoc and regular service for oil and gas and industrial customers. Service support is designed for both scheduled and unscheduled maintenance. Our highly trained field service engineers have the expertise to undertake complex service support as well as advise customers on increasing uptime and reducing maintenance costs. This approach reduces overall costs for our customers by providing maintenance tips, advising on condition-based monitoring and undertaking periodic inspections.

The advantages offered to the client by Wasco are:

- Scheduled & unscheduled maintenances
- Troubleshooting and condition-based monitoring
- Specialised services (commissioning & consultancy)
- Certified engine and compressor engineers
- Special tools for inspection & troubleshooting
- Onshore and offshore certifications
- Quick response time with centralised support
- Workshops in Singapore and Dubai
- Highly skilled and certified staff for overhauling and repair
- Onsite overhauling (minor/major) and repair solution
- Onsite repair solutions for all ancillary equipment
