

Retrofits, Revamps and Upgrades

Wasco Engineering has a comprehensive program of retrofits, revamps and upgrades to help customers save on expensive capital equipment. Equipment that has been used comprehensively can be retrofit to replace worn-out parts or upgraded based on the client requirements.

Wasco has a workshop facility in Dubai, Singapore and Batam to undertake overhauling and repair works. Wasco's team of experienced engineers and field personnel determine the feasibility of undertaking overhauls; provide technical advice on the best course of action and execute the agreed plan as per OEM recommendations.

Wasco can undertake an overhaul of engines and compressors to ensure the life of expensive capital equipment is extended. All minor and major overhauls can be carried out as per customer requirements in our workshop or at the site. Wasco also undertakes the upgrade of compression equipment to mitigate the effects of the age equipment and the changes in operating parameters, including a change in well profile. These revamp guarantee production increase at a very low cost compared to investment in new equipment.

Wasco Engineering has the in-house capability to rebuild compressor valves and associated equipment. Repair of high-value equipment is another area of expertise that our team is proficient in.
