

Reciprocating Compressor

Wasco packages reciprocating gas compressors from 60hp to 11,000hp using various drivers to meet customers' specifications. Some of the commonly used drivers are fixed/variable speed electric motors, gas engines and diesel engines.

Wasco's packages are proven in the field for reduced vibration and high reliability. This is due to the proper design and study of the complete package, special attention given to the structural design and small bore piping. Packages are built complying to meet API618 and ISO13631 requirements.

Some of the applications of these compressors are vapour recovery, gas lift, gas injection, gas boosting, gas gathering, acid gas recovery and injection and fuel gas boosters.
