

FPSO Redeployment/ MOPU

FPSO redeployment and MOPU deployment in recent times has been hugely successful in reaching the first oil/enhanced oil recovery within the shortest possible timeframe. Both FPSO Redeployment/MOPU can involve brownfield modifications, life extension requirements and new process/utility requirements. Due to these unique requirements, the right capability and expertise are required to ensure project success.

Such studies involve hull strength and upgrade, marine and utility system design, topside process design, and riser and mooring design. For MOPUs Wasco works with partners in the marine sector to offer a complete solution to our Client including the conversion of existing rigs or new builds.
