

Rental of Gas Compression and Gas Generator Packages

Wasco Engineering packages and rents reciprocating gas compression and gas generator packages. Renting compression equipment or power generator provides flexibility to maintain capital-intensive oil and gas plants. It helps customers to direct their best potential.

We maintain compression rental fleets throughout the world, as well as build new packages for clients to rent. Wasco installs commissions and operates these compressors. Availability guarantees can be provided to ensure the customer is assured of production without worrying about performance. Wasco provides qualified and experienced manpower to operate the compressors and maintains on-site inventory to support operational needs.

Compressor and gas generator rentals are a quick, flexible and convenient option for those who are looking to operate their plant without any major capital investment. The equipment buyout option is provided once the customers have gauged performance and have funds to invest in capital equipment.
