

Complete Gas Plants and Topsides Modules - BOO, BOT, BOOT Models

Wasco is well recognised and respected for having the resources to deliver the most complex modular solutions for FPSO topsides. Modules comprise a comprehensive, multi-level collection of integrated systems that performs various kinds of processing tasks in the upstream oil and gas industry. Designed and delivered as a fully functioning unit, Wasco's modules offer a complete solution with a mechanical and process guarantee to ensure a reliable and trouble-free operation. Modularisation can provide a number of benefits:

- Minimises the number of interfaces thus decreasing risk associated with field construction
- Reduces on-site construction personnel
- Pre-assembly in a controlled shop environment minimises incremental weather conditions
- Achieves higher productivity
- Reduces overall cost and delivery schedule, resulting in earlier startup & production
